

Supplemental Fig. S1. Blood glucose and lipid profiles in plasma of apurinic/apyrimidinic endonuclease1/redox factor-1 (APE1/Ref-1)^{+/-} and APE1/Ref-1^{+/+} mice. (A) Blood glucose, (B) triglyceride, (C) total cholesterol, (D) high-density lipoprotein (HDL) cholesterol, or (E) low-density lipoprotein (LDL) cholesterol levels in plasma of APE1/Ref-1^{+/-} and APE1/Ref-1^{+/+} mice. Note that triglyceride levels were significantly elevated in APE1/Ref-1^{+/-} mice compared to wild-type controls. Fasting blood samples were collected from APE1/Ref-1^{+/-} and APE1/Ref-1^{+/+} mice as described in 'Methods.' Data are presented as mean \pm standard error of the mean ($n=5$). ^a $P < 0.05$ vs. APE1/Ref-1^{+/+} mice.
